

# What is Household Grease?

Household Grease is more commonly referred to as Fats Oils & Grease or

**F.O.G.**

**FOG from Restaurants and Residential homes are common causes of sewer backups.**

**FOG from left over food, meat fat, cooking oil, baking ingredients, heavy sauces, and dairy products are released by kitchens without grease interceptors or other grease control measures.**

**FOG gets into the plumbing drain system and builds up inside our pipes.**

**Eventually, the buildup blocks the entire pipe, causing sewage backups and overflows.**

BY POURING  
HOUSEHOLD FOG AND  
WASTE DOWN THE  
DRAIN YOU WILL  
EVENTUALLY CLOG  
YOUR PIPES OR THE  
CITY SEWER IN YOUR  
AREA.

**HELP US AND  
YOURSELF  
BY POURING  
GREASE INTO  
A  
DISPOSABLE  
CAN AFTER IT  
HAS COOLED  
DOWN SOME.**

**YOU CAN ADD  
GREASE TO IT  
UNTIL IT IS  $\frac{3}{4}$   
FULL.  
WHEN COOLED  
DOWN OR  
HARDENED IT  
CAN THEN BE  
PLACED INTO  
THE TRASH  
CAN FOR  
DISPOSAL.**

# THERE ARE OTHER METHODS OUT THERE FOR DISPOSING OF GREASE.

THESE FOIL LINED BAGS  
AND CONTAINER ARE  
MADE  
JUST FOR THIS PURPOSE.

THE CONTAINER AND  
REPLACEMENT BAGS CAN  
BE PURCHASED ONLINE  
FROM MOST  
**BIG NAMED** STORES

**ONCE THE  
GREASE HAS  
COOLED TO 350  
OR LESS,  
YOU CAN DUMP  
IT RIGHT INTO  
THE BAG.**

**WHEN BAG IS  $\frac{3}{4}$   
FULL, PITCH IT  
INTO THE TRASH.**

**OVEN BAGS USED FOR BAKING CAN  
ALSO BE USED.**

**PLACE THEM IN ANY CONTAINER,  
WHEN GREASE COOLS TO 350  
DEGREES OR LESS, DUMP IT IN.  
WHEN IT IS COOLED COMPLETELY,  
TIE IT AND PITCH IT IN THE TRASH.**
